Compliance Audit

State Compliance Audits for Pharmacy Programs

Pro Pharma performs State Compliance Audits for Health Plan Pharmacy Programs. The compliance audits reference applicable state regulatory code criteria. Both the Plan and the PBM are issued requests for documentation to support code compliance, delegation to the PBM, and summary bulleted information to help guide the audit.

Codes are evaluated with specific emphasis on all parts of each code. This allows for review of policies with language that complies with the code and documentation specific to the code indicating implementation.

Pro Pharma takes the following steps to address gaps in compliance:

- Review each code and request Policy & Procedure documentation
 - If needed, Pro Pharma assists the PBM with appropriate language consistent with the codes
- Request letters and implementation documents to demonstrate actions consistent with State Compliance Rules & Regulations.
 - If required documents or letters are not available, Pro Pharma provides language and assists the PBM with the required implementation documentation

Any unresolved issues is brought to the Plan for discussion of further actions. The objective is to avoid corrective action plans by providing language and sample documents that are consistent with state rules & regulations.

About Pro Pharma & ProData Analytics

Pro Pharma Pharmaceutical Consultants, Inc. is a multi-service, woman owned, privately held consulting firm offering a vast portfolio of services to public and private entities including self-insured employers, unions, public employers, for-profit hospitals and integrated health networks, health care insurance companies, worker's compensation insurers, small-to-medium sized HMO's, and physician groups.

Established in 1986, Pro Pharma's consulting services are grounded in the use of data and the communication of that information to define benefit trends, drivers and other analytical indicators.

Pro Pharma has developed IT capabilities over the last 30 years that focus on Standardization and Analysis of Integrated Data Sets (i.e., Medical Encounter, Member, Provider, Pharmacy Claim detail, etc.), for audit work, oversight and management of PBMs and for control of specialty medical costs and programs.

Pro Data Analytics was formed to focus on data analytics in all industries. ProData has significant expertise in Programming, Systems Analysis, and Data Analysis.

Pro Data Analytics has been supporting Clients who need:

- Assistance building their own analytics internally
- A bridge analytics to outsource while developing inhouse
- Back Office Support (hosting) for those clients who require more comprehensive "just in time" support
- Specific one-time analyses that can be addressed quickly
